

330
D
27. (New) A wireless network system for replenishing prepaid accounts comprising:

5
A hand
a processor that receives network messages associated with a user-dialed replenishment code, wherein said network messages comprise wireless telephone identification information and personal identification number (PIN) information; a replenishment database comprising prepaid account information for said users; said processor having means for identifying users by extracting said wireless telephone identification information and authenticating said PIN information; and said processor having means for initiating a replenishment transaction using account information for said user, wherein said account information for said identified user is retrieved from said database.

10
28. (NEW) A method for replenishing prepaid accounts comprising the steps of: receiving dialed digits from a wireless device; identifying the wireless device using calling number information contained in network messages associated with said wireless device; 5 detecting a personal information number (PIN) from said dialed digits; selecting, from a database, a prepaid account associated with said wireless device; and replenishing said prepaid account by adding a designated amount.

REMARKS

Applicant has added new claims 22 - 28. The new claims are supported by the specification at pages 18-20, in Figure 4 and in other parts of the disclosure. No new matter has been added by these claims.

Applicant respectfully requests that the Examiner call the below listed attorney if the Examiner has any questions or comments concerning the foregoing.

Respectfully submitted,

Michael J. Fogarty, III
